# HALIMA ABDIRIZAK MOHAMED

**SOFTWARE ENGINEER | BACKEND & FULL-STACK | APPLICATION SECURITY**

Indonesia • halimamohamedabdirizak@gmail.com • Portfolio • LinkedIn • GitHub

## PROFESSIONAL SUMMARY

Information technology undergraduate concentrating in cybersecurity with backend internship experience building payment integrations, usage metering and tenant-isolated APIs using FastAPI and PostgreSQL. Develops full-stack applications with React, TypeScript and Python, with practical experience in authentication, authorization, automated testing and web application security. Interested in backend, full-stack and application security roles.

## TECHNICAL SKILLS

**Languages:** Python, TypeScript, JavaScript, SQL, PHP, HTML, CSS
**Backend & Frontend:** FastAPI, Flask, Node.js, Express, REST APIs, React, Next.js, Vite
**Databases & ORM:** PostgreSQL, MongoDB, SQLite, SQLAlchemy, Alembic
**Testing & Tools:** pytest, Vitest, Testing Library, Git, GitHub, Docker, Linux
**Security:** JWT, RBAC, OWASP Top 10, web application security, CSRF protection, SafeLine WAF

## EXPERIENCE

**FlyRank AI | Backend AI Engineering Intern** • **Remote** • **Jul 2026 – Sep 2026**

- Implemented Midtrans payment webhooks in FastAPI, verifying HMAC-SHA512 signatures and using idempotency controls to prevent duplicate payment processing.
- Built usage metering, subscription quota enforcement and tenant data isolation for Free and Pro plans with PostgreSQL, SQLAlchemy and Alembic.
- Validated backend functionality with 68 automated tests.

**President University | System Intern, E-Technology Program**

- Uploaded and organized course materials in Moodle to support the program's online learning activities.
- Created a separate backup dashboard for the Moodle site and supported the program's digital learning platform.

## SELECTED PROJECTS

**Slotwise – Appointment Booking Platform**

Python, FastAPI, PostgreSQL, Alembic | GitHub

- Developed appointment booking and management workflows for customers, staff and admins, including booking, cancellation, rescheduling, service management and business-hour controls.
- Implemented UTC storage with Asia/Jakarta scheduling, HttpOnly cookie sessions, CSRF protection and role-protected routes; tested with pytest, Vitest and Testing Library.

**FlyRank Billing Engine**

Python, SQLAlchemy, PostgreSQL, Docker, pytest | GitHub

- Designed a layered API, service and repository architecture for AI usage metering, cost calculation and subscription quota enforcement.
- Used tenant ID and idempotency-key constraints to prevent duplicate usage; tested the Midtrans Sandbox checkout-to-webhook upgrade flow on PostgreSQL.

**SEMIS – Secure Employee Management Information System**

Node.js, Express, React, MongoDB | GitHub

- Built a role-based HR application covering employee records, attendance, payroll and leave approval.
- Implemented email OTP MFA, JWT sessions, RBAC, bcrypt password hashing, AES-256 field encryption, input validation, rate limiting, CSRF tokens and audit logging.

## EDUCATION & CERTIFICATIONS

**President University, Indonesia**

B.Sc. Information Technology, Cybersecurity Concentration — Expected 2027 | CGPA: 3.73/4.00

**Certifications:** Google Cybersecurity Professional Certificate • GitHub Foundations (GH-900) • AWS Security Fundamentals
