SUMMARY

Informatics student (cybersecurity concentration) interested in blue team and security operations. Through a SOC analyst internship, forensics CTFs and my own projects, I have practised log analysis, Splunk alerting and phishing investigation, and I document what I find, including what my tools miss. Seeking a SOC or security analyst internship from January 2027.

EXPERIENCE

System Intern, E-Technology Program | President University, Cikarang *Sep 2026 – Present*

- Administer Moodle course content and built a backup dashboard for course content backup and recovery, protecting the program's learning materials against loss.

SOC Analyst Intern | TechBiz Security Academy, Remote *Aug 2026 – Sep 2026*

- Built a virtual SOC lab (VirtualBox, Kali Linux, Windows) and analysed Linux auth logs and Windows Event IDs (4624, 4625, 4688) to identify failed and successful logins.
- Set up Splunk, ingested logs, and built dashboards plus an alert for repeated failed logins.
- Investigated phishing emails (headers, SPF, DKIM) and checked IOCs with VirusTotal and AbuseIPDB.

Backend AI Engineering Intern | FlyRank AI, Remote *Jul 2026 – Sep 2026*

- Secured Midtrans payment webhooks by verifying HMAC-SHA512 signatures and using idempotency keys to block duplicate charges.
- Enforced data isolation between customer accounts and plan limits, covered by 68 automated tests.

SECURITY PROJECTS

WAF Homelab | SafeLine, Docker, Kali Linux, DVWA *GitHub*

- Placed the SafeLine web application firewall in front of a deliberately vulnerable app (DVWA) in an isolated network and attacked it from Kali.
- SQL injection and XSS were blocked; command injection was logged but not blocked, a gap I documented; an HTTP flood was slowed by rate limiting.

Hookline | Phishing link detection, Chrome extension *GitHub*

- Flags lookalike domains, homoglyphs, raw IP links and reply-to mismatches in Gmail, and explains why each link was flagged.
- Evaluated on held-out test sets (50,000 URLs each): 98–99% precision at a 0.2–0.5% false-positive rate, 24–26% recall. Found and corrected an evaluation artifact that had inflated the original recall from 11.7% to 40.5%.

Dependency Compass | Vulnerability triage *GitHub*

- Checks dependencies against the OSV vulnerability database and ranks fixes by active exploitation (CISA KEV), severity and available patches.
- Treats uploaded files as untrusted input with size and nesting limits, and lists dependencies it could not verify.

CTF COMPETITIONS

Digital Forensics CTF, Team Captain | President University, Apr 2026 *Write-ups*

- Worked on 7 of the 10 challenges completed by a 4-person team, involving a phishing email in captured network traffic, Windows event logs and the NTFS change journal.

TryHackMe Hacker Holidays | Jul – Aug 2026 *Write-ups*

- Solved 14 daily challenges across 7 categories, including digital forensics, cloud misconfiguration and web exploitation, with a published write-up for each.

TECHNICAL SKILLS

Security operations: Splunk, log analysis (Linux auth.log, Windows Event Viewer), Wireshark, NetworkMiner, FTK Imager, phishing analysis, VirusTotal, AbuseIPDB, incident reporting
Frameworks: MITRE ATT&CK, Cyber Kill Chain, NIST incident response lifecycle, OWASP Top 10, NIST CSF
Systems and tools: Kali Linux, Ubuntu, Windows, VirtualBox, Docker, SafeLine WAF, Nmap, Git and GitHub
Networking: TCP/IP, DNS, OSI model, common ports and protocols
Programming: Python, SQL

EDUCATION

B.Sc. Informatics, Cybersecurity Concentration | President University | CGPA 3.73 / 4.00 *Sep 2024 – Expected 2027*

CERTIFICATIONS AND LANGUAGES

Certifications: Google Cybersecurity Professional Certificate; GitHub Foundations (GH-900); Google AI Professional Certificate
Training: AWS Security Fundamentals; TryHackMe Pre Security; freeCodeCamp Information Security
Languages: Swahili (native), Somali (native), English (fluent)
