Halima Abdirizak Mohamed

Cybersecurity & Backend Development

Indonesia | halimamohamedabdirizak@gmail.com | linkedin.com/in/halima-abdirizak-mohamed | github.com/hal-imaxabdi

Summary

Cybersecurity undergraduate at President University with hands-on experience in security testing, investigation, and backend development. Experienced in building security-focused features, automating tests, and analyzing vulnerabilities. Interested in developing reliable, secure applications and systems while continuing to grow across cybersecurity and software engineering.

Education

President University *(Indonesia)* **Expected Graduation: 2027**

Bachelor of Information Technology, Cybersecurity Concentration — CGPA: 3.73/4.00

Coursework: Network Security, Cryptography, Risk Management, Web Development

Technical Skills

Cybersecurity: SOC Monitoring, Log Analysis, Phishing Analysis, Vulnerability Detection, Web Application Security, Risk Assessment

Frameworks & Tools: NIST CSF, MITRE ATT&CK, Wireshark, Kali Linux, SafeLine WAF

Languages & Backend: Python, PHP, JavaScript, SQL, FastAPI, Docker, Git, GitHub

Experience

ElectraWireless **Sep 2026 – Present**

Cybersecurity Intern *Remote*

- Built **SHA-256 hash-comparison malware detection** for an IoT firmware vulnerability scanner, integrated into the existing firmware extraction pipeline.
- Wrote automated tests for known malware hashes, unknown files, and a seeded benign signature; converted a network-scanner script into a **pytest suite** and fixed an IPv6 parsing issue affecting live scans.
- Maintained a regression suite of **130+ tests** across successive integrations in a multi-contributor Git workflow.

FlyRank AI **Jul 2026 – Sep 2026**

Backend AI Engineering Intern (Task-Based) *Remote*

- Implemented **HMAC-SHA512 webhook verification and idempotency controls** for Midtrans payments on the FlyRank Billing Engine, reducing unauthorized and duplicate payment events.
- Built usage metering, subscription quotas, and **tenant data isolation** for Free and Pro plans (FastAPI, PostgreSQL, SQLAlchemy, Alembic), validated by **68 automated tests**.

Projects

SEMIS – Secure Employee Management Information System *MFA, JWT, RBAC, Encryption*

- Designed a secure employee management application with **MFA, JWT authentication, role-based access control**, and encryption to protect employee data.

AI-Assisted Risk Assessment & Security Audit Platform *Flask, SQLite, Ollama*

- Mapped **51 security controls** to the NIST Cybersecurity Framework with evidence collection, RBAC, audit report generation, and a local AI assistant that explains findings.

Hookline – Phishing and Email Security Analysis

- Built a tool that analyzes suspicious emails and URLs to detect indicators of social-engineering attacks and surface security findings.

WAF HomeLab (SafeLine)

- Deployed and configured a Web Application Firewall home lab to test traffic filtering and attack detection and prevention.

Certifications

Google Cybersecurity Professional Certificate | GitHub Foundations (GH-900) | AWS Security Fundamentals
